

# The Protist Ribosomal Reference database ecosystem

Daniel Vaulot and the PR<sup>2</sup> team

PR<sup>2</sup> Zoom meeting - 2022-11-09

# Outline

- PR<sup>2</sup>
- PR<sup>2</sup> primers
- metaPR<sup>2</sup>
- Open Discussion

figure: adapted from Adl et al. 2012  
text: Geijerstrand

# Key features

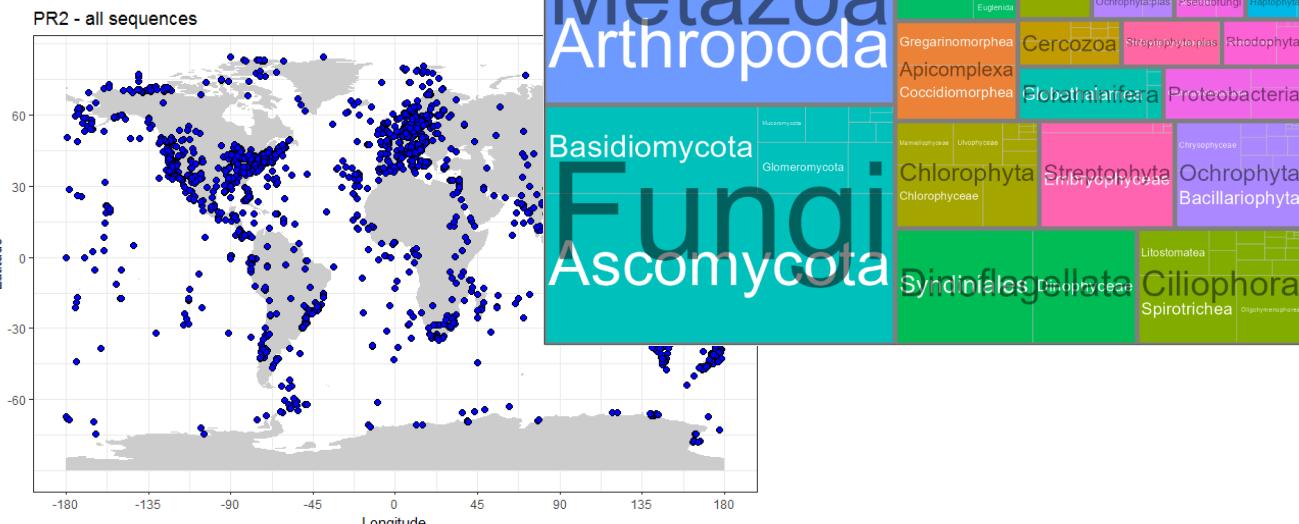

- **Unified taxonomy** (8 ranks from kingdom to species)
- 197 602 sequences
  - nuclear 18S rRNA
  - plastid 16S rRNA (PhytoRef)
  - bacteria and archaea 16S rRNA
- **Quality control** (e.g. > 500 bp., N < 20, no "NN")
- **Metadata** (e.g. coordinates, environment)
- **Version 4.14.0 released in May 2021**
- Web site: <https://pr2-database.org/>

## The PR<sup>2</sup> reference sequence database

### DINOREF: A curated dinoflagellate (Dinophyceae) reference database for the 18S rRNA gene

Solenn Mordret<sup>1</sup> | Roberta Piredda<sup>1</sup> | Daniel Vaulot<sup>2</sup> | Marina Montresor<sup>1</sup> |  
Wiebe H. C. F. Kooistra<sup>1</sup> | Diana Samo<sup>1</sup>

MORDRET ET AL.

MOLECULAR ECOLOGY RESOURCES

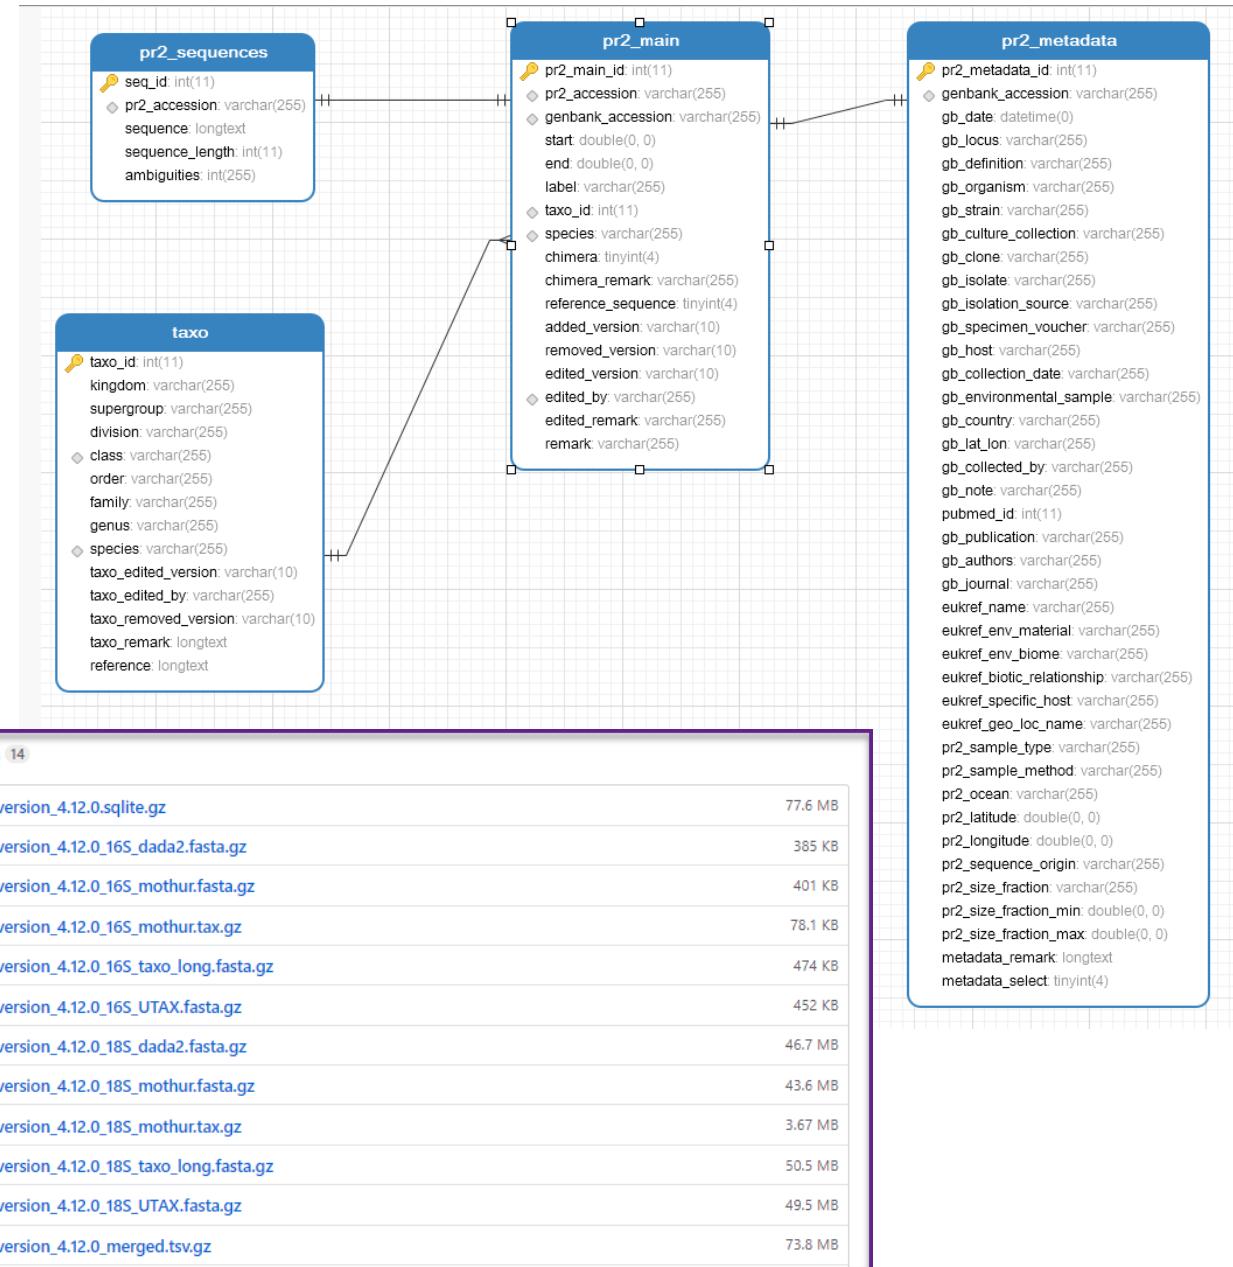

WILEY

**FIGURE 2** Consensus phylogenetic tree (RAxML, GTR model) based on 1,540 unique 18S rRNA sequences in the DINOREF. Alignment of 2,153 bp with three sequences of Ciliates (U97109; X56165 and X03772) and three sequences of Apicomplexa (M97703; AF236097 and AF291427) used as outgroup. Clades are ordered according to their size and are supported by bootstrap values  $\geq 50\%$ ; black dots are proportional to bootstrap values. The colours of the Superclades and clades correspond to those in Table 1. Clades within each Superclade have been marked (A, B, C, etc.), along the outer rim of the tree, corresponding to their assignment in this figure. The Superclades "Uncertain Naked Dinophyceae" and "Uncertain Thecate Dinophyceae" have not been marked and neither have the small clades on the upper left of the tree. The tree was visualized on iTOL version 3—Interactive Tree of Life (Letunic and Bork, 2016, at <https://itol.embl.de/tree/1932052318357911479398328>) in which all clades are marked

# Management

- MySQL database
- R scripts for:
  - importing
  - exporting
  - validating
- Data provided as
  - text files (for dada2, mothur)
  - fasta (phylogeny)
  - R package

# R package

pr2database 4.14.0 [Home](#) Get started Reference Articles Changelog

## Get started

Daniel Vaulot

The PR2 database is provided as a R package called `pr2database`. This page provides instruction to install and use the package.

### Installation

Install from the GitHub web site using the `devtools` package

```
install.packages("devtools")
devtools::install_github("pr2database/pr2database")
```

\* installing \*source\* package 'pr2database' ...  
\*\* R  
\*\* data  
\*\*\* moving datasets to lazyload DB  
\*\* byte-compile and prepare package for lazy loading  
\*\* help  
\*\*\* installing help indices  
 converting help for package 'pr2database'  
 finding HTML links ... fini  
 pr2.html  
\*\* building package indices  
\*\* testing if installed package can be loaded  
\*\*\* arch - i386  
\*\*\* arch - x64  
\* DONE (pr2database)  
In R CMD INSTALL

### The R pr2database package

Daniel Vaulot edited this page 4 days ago · 7 revisions

The PR2 database is now provided as a R package

#### Installation 1

Install from the GitHub web site using the `devtools` package

```
install.packages("devtools")
devtools::install_github("vaulot/pr2database")
```

#### Selecting sequences from a specific taxon 2

Let us select all the available sequences for the Mamiellophyceae *Ostreococcus*

```
# Filter only the sequences for which the column genus contains Ostreococcus
pr2_ostreo <- pr2 %>% dplyr::filter(genus == "Ostreococcus")

# Select only the columns of interest
pr2_ostreo <- pr2_ostreo %>% dplyr::select( genbank_accession, species,
pr2_sample_type, gb_strain, gb_clone,
pr2_latitude, pr2_longitude,
sequence_length, sequence )
```

#### Drawing a map of sequence locations 3

```
library(maps)
world <- map_data("world")

ggplot() +
  geom_polygon(data = world, aes(x=long, y = lat, group = group), fill="grey") +
  coord_fixed(1.3) +
  geom_point(data=pr2_ostreo, aes(x=pr2_longitude, y=pr2_latitude), fill="blue", size=2, shape=21) +
  ggtitle("Ostreococcus")
```

Ostreococcus

lat

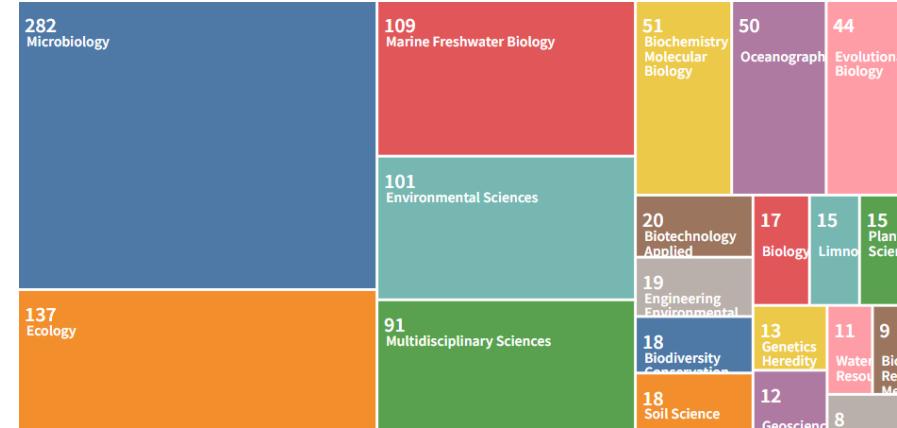

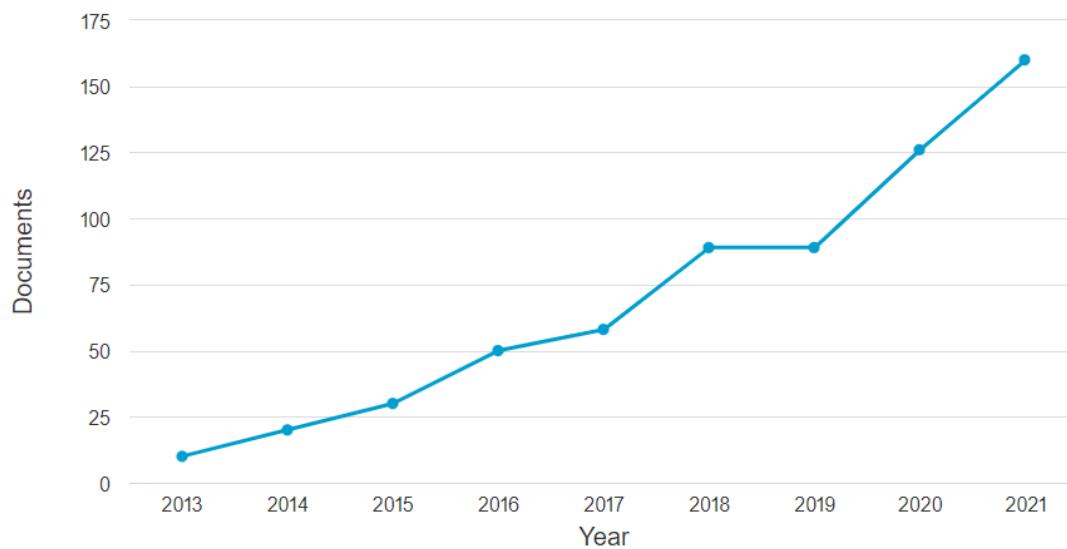

long

# More than 700 papers citing PR<sup>2</sup>

🏆 As of January/February 2022, this [highly cited paper](#) received enough citations to place it in the top 1% of the academic field of **Biology & Biochemistry** based on a highly cited threshold for the field and publication year.

Documents by year

# What's next for pr2-database

- Web interface (end 2022)
- Version 4.15 (early 2023) - update of some groups
- Full operon
- Functional annotation
  - Trophic mode (photo, hetero, mixo...)
  - Size group (pico, nano, micro...)

# The PR<sup>2</sup> primer database

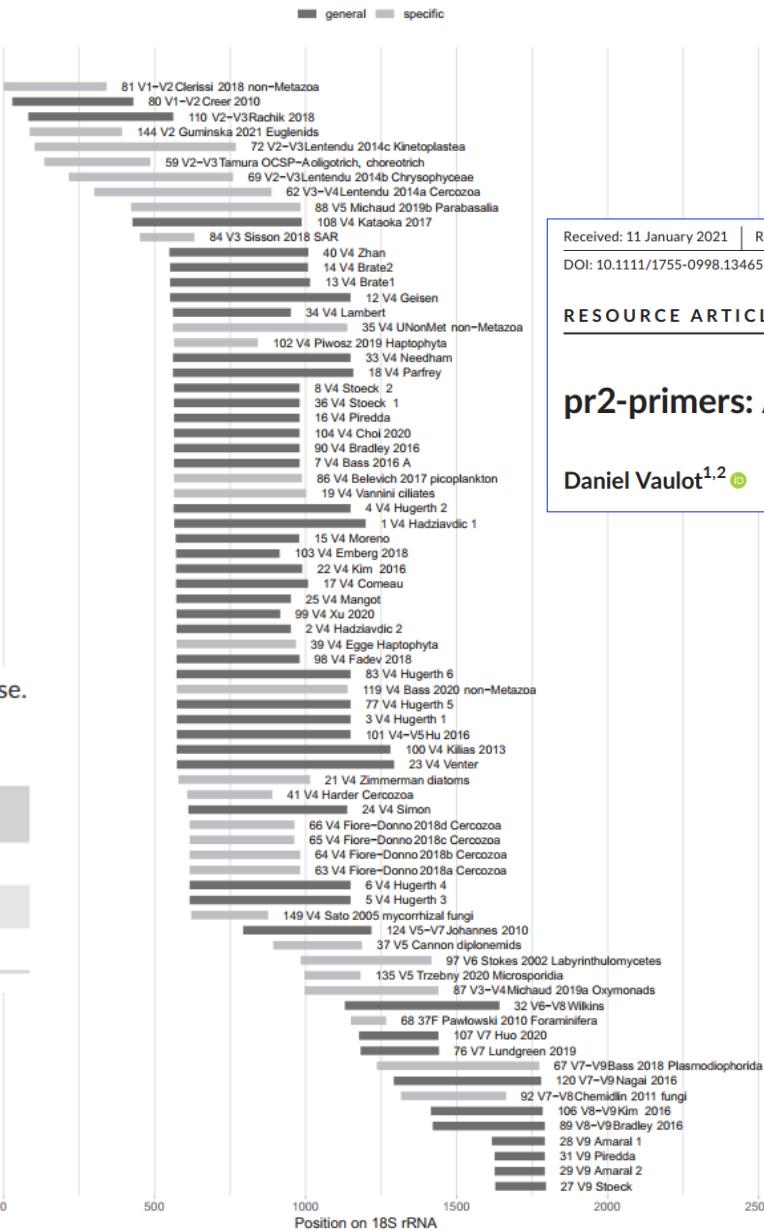

# 18S rRNA primers

- Wide diversity of primers and sets
- No database for protists
- Taxonomic specificity of primers?

**TABLE 1** Summary of primers listed in the pr2-primers database. General primers target all eukaryotes and specific primers only certain taxonomic groups

| Direction | General primers | Specific primers |
|-----------|-----------------|------------------|
| fwd       | 55              | 89               |
| rev       | 53              | 88               |
| Total     | 108             | 177              |

Received: 11 January 2021 | Revised: 31 May 2021 | Accepted: 6 July 2021

# What's next for pr2-primers

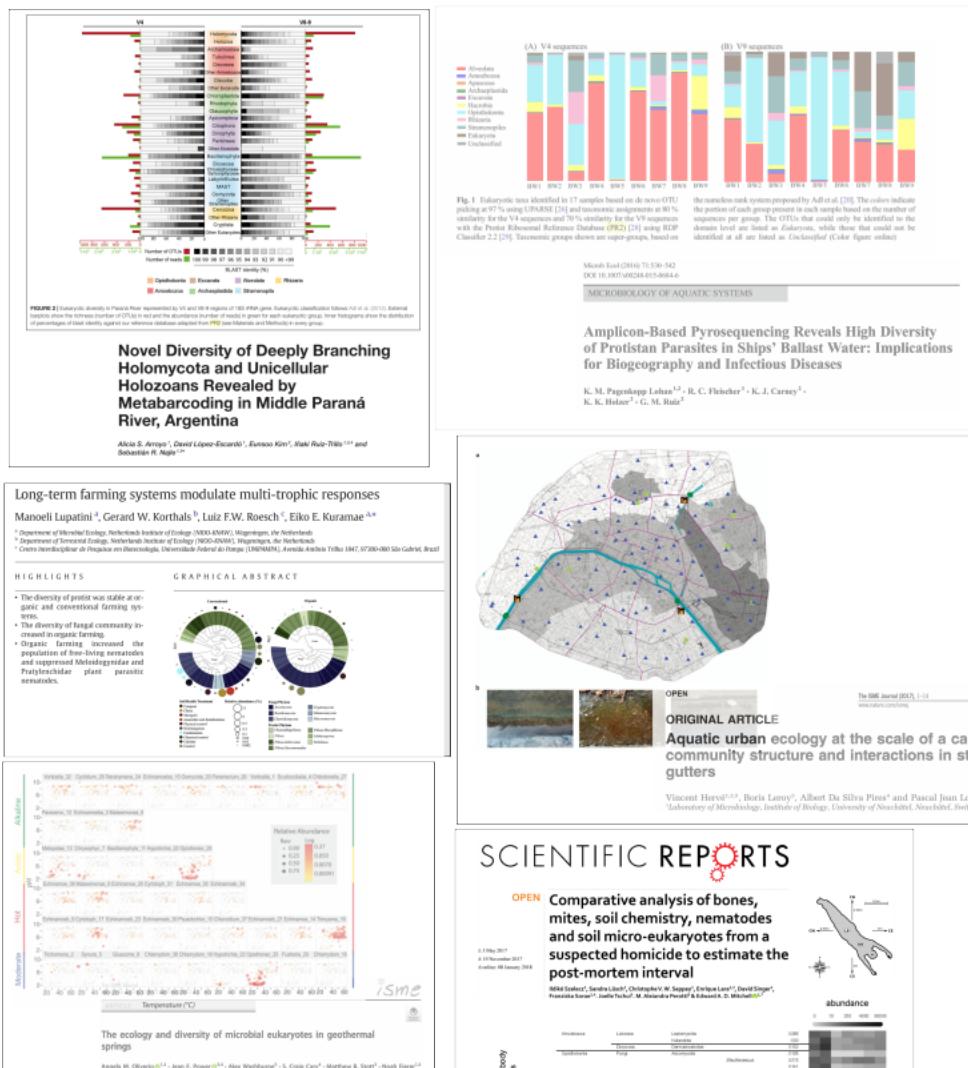

- Update PR<sup>2</sup> from 4.12.0 to 4.14.0
- Add more primers
- ITS/28S primers

# The metaPR<sup>2</sup> barcode database

# Motivation

- In the last decade, many metabarcoding studies
- Data hard to compare:
  - Different primers
  - Different processing
  - Different similarity levels
- Processed data usually not available
- Metadata not available
- Few global datasets used (*Tara*, *Malaspina*)
- These datasets only temperate and tropical marine

# Strategy

- Scan papers and build database
- Start from raw data (fastq) available from GenBank SRA
- Use dada2 pipeline producing ASVs
  - Different datasets are comparable
- Annotate taxonomy with PR<sup>2</sup>
- Integrate metadata
  - Latitude and longitude
  - Depth
  - Substrate (water, ice, soil)
- Data stored in MySQL database
- Develop web interface using R shiny

The metaPR2 database

Select datasets

41 items selected

Select Samples

Gene regions: V4

DNA or RNA: DNA

Ecosystems: oceanic, coastal, freshwater lakes, freshwater rivers, terrestrial

Substrates: water

Size fractions: pico, total

Depth levels: surface

Select ASVs

Minimum number of total reads per ASV: 100

Select Taxa

Validate Taxa Reset Taxa

Press VALIDATE after changing taxonomy to update screen.

Press RESET to reset taxonomy to top level (need to press validate after reset)

Supergroup: Archaeplastida

Division: Chlorophyta

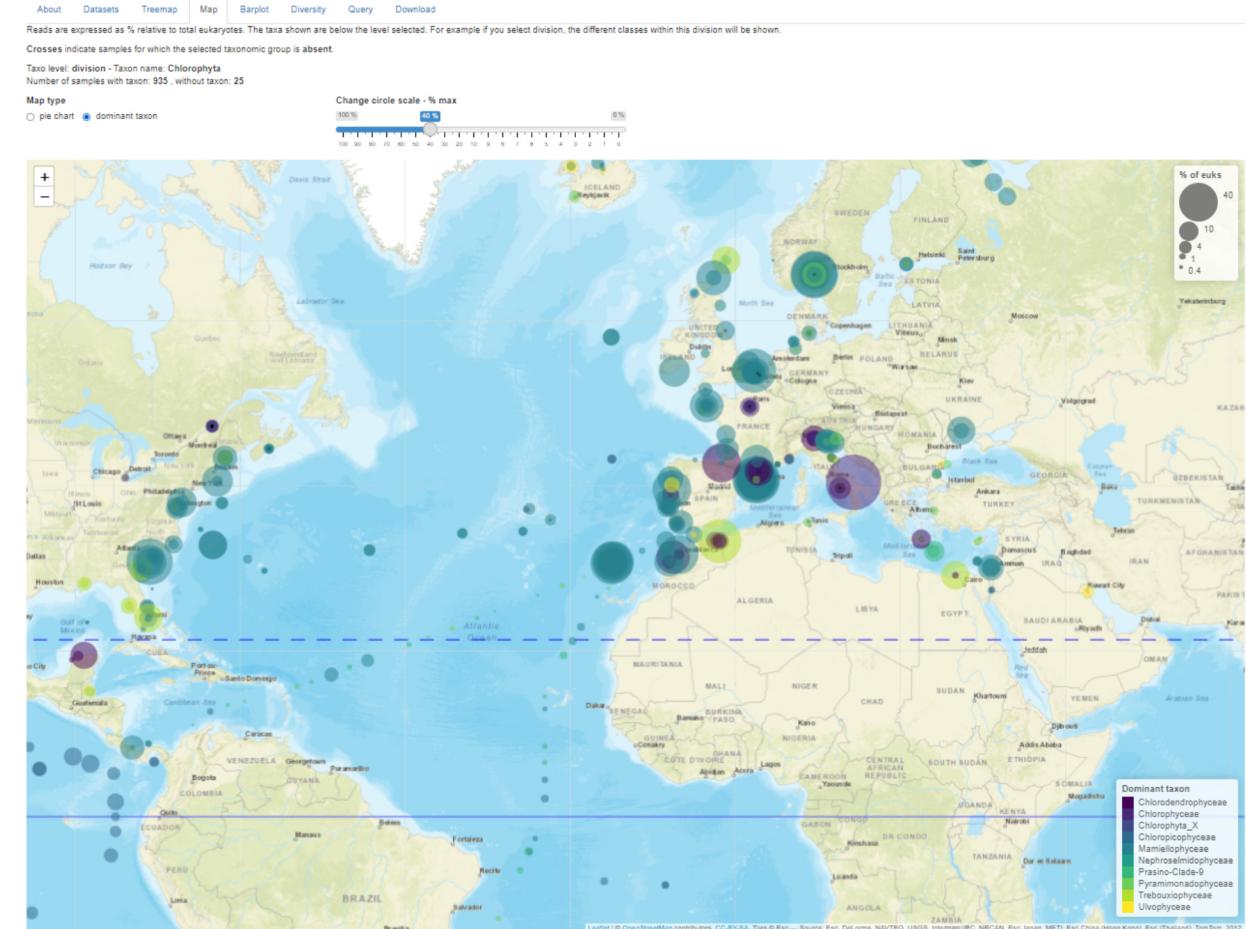

Class: All

Order: All

Family: All

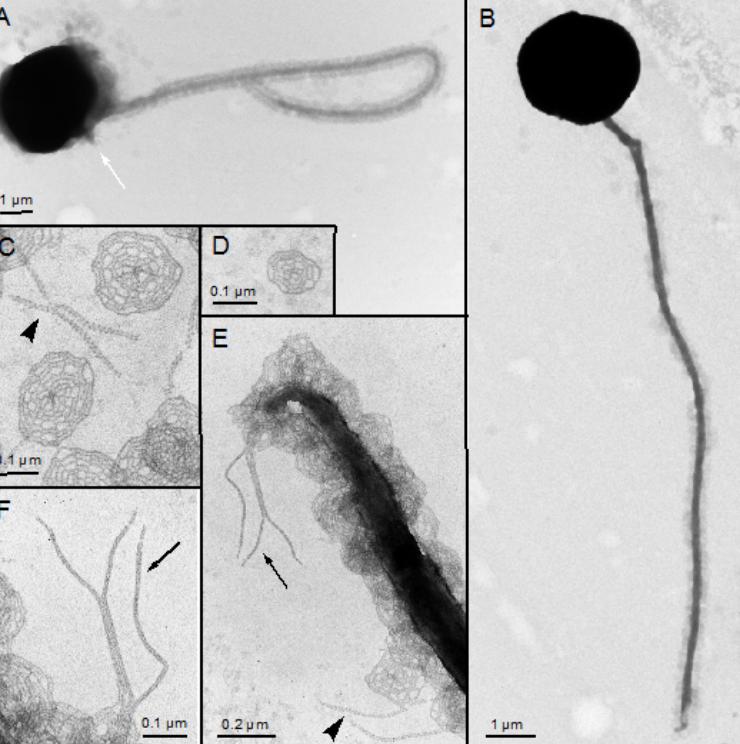

Genus: All

Species: All

# Biogeography

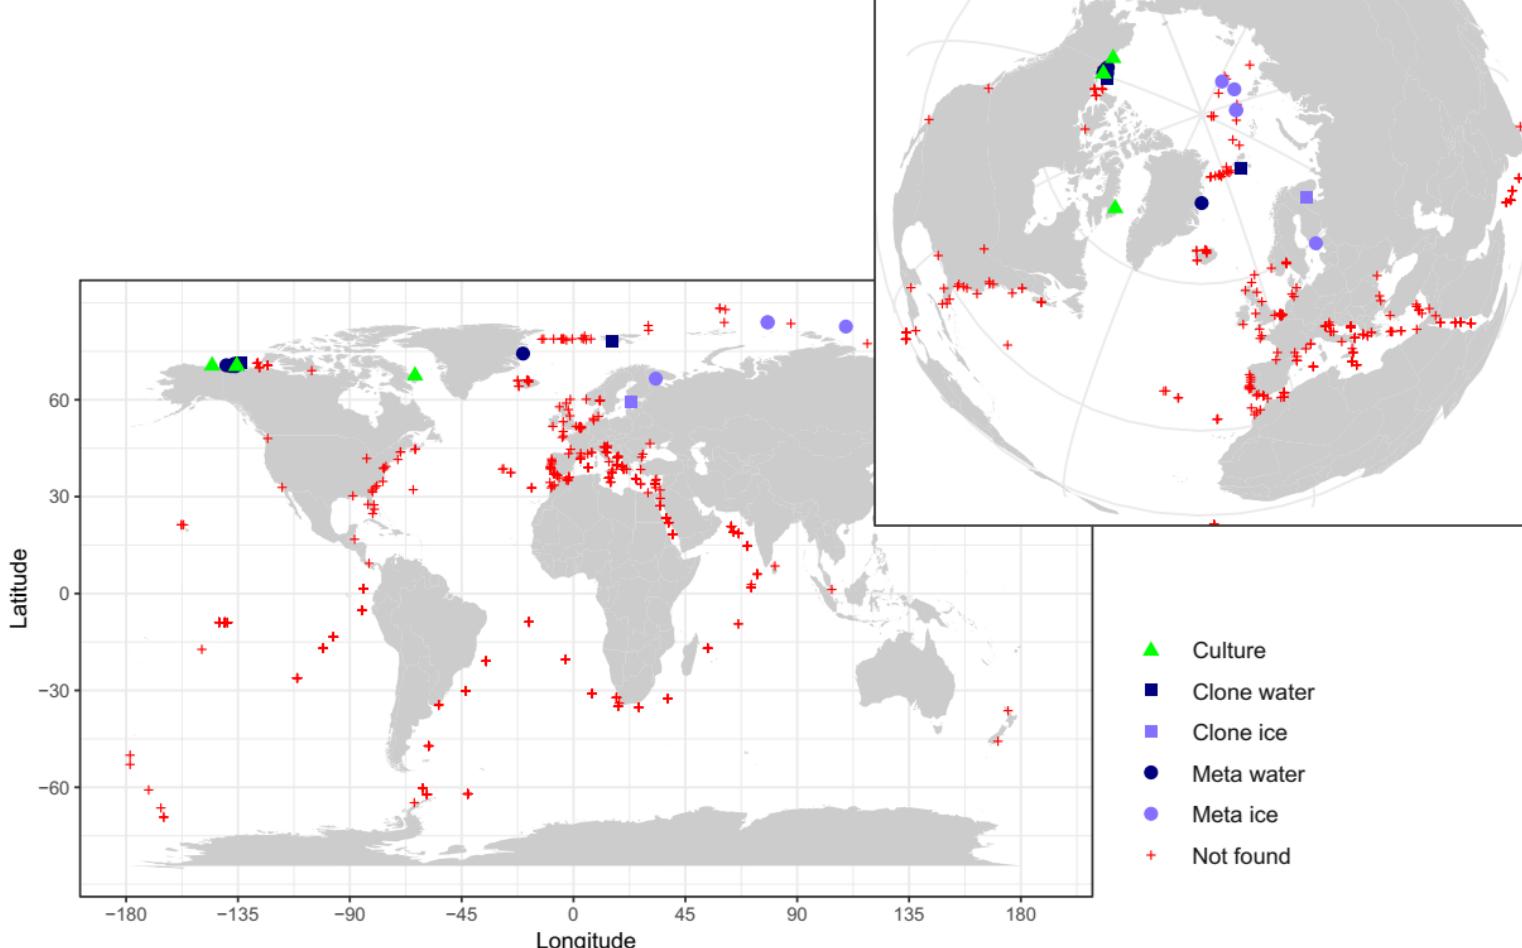

*J. Phycol.* 56, 37–51 (2020)  
© 2019 Phycological Society of America  
DOI: 10.1111/jpy.12932

MANTONIELLA BEAUFORTII AND MANTONIELLA BAFFINENSIS SP. NOV. (MAMIELLALES, MAMIELLOPHYCEAE), TWO NEW GREEN ALgal SPECIES FROM THE HIGH ARCTIC<sup>1</sup>

Sheree Yau<sup>2,3</sup>

Integrative Marine Biology Laboratory (BIOM), CNRS, UMR7232, Sorbonne Université, Banyuls sur Mer, France

# What's next for metapr2

- Datasets

- Version 2.0 (nov. 2022) :
    - **18 new datasets**
    - Clustered ASVs
    - Bug fixes and improved visualization
    - New panels (taxonomy)

- Planned

- More datasets (soils, freshwater, microbiomes)
  - Heatmaps

# Team

## Core team
